

SCALE FOR PROJECT NETPRACTICE (/PROJECTS/NETPRACTICE)

You should evaluate 1 student in this team

Git repository

`git@vogsphere.42heilbronn.de:vogsphere/intra-uuid-d37c37f5-e85e`

Introduction

Please adhere to the following rules:

- Remain polite, courteous, respectful and constructive throughout the evaluation process. The community's well-being depends on it.
- While interacting with the person (or the group) whose work is evaluated, identify the possible dysfunctions in their project. Take the time to discuss and debate any problems you may have identified.
- You must consider that there might be some differences in how your peers might have understood the project's instructions and the scope of its functionalities. Always keep an open mind and grade them as honestly as possible. The pedagogy is only valid if peer evaluation is conducted seriously.

Guidelines

- Only evaluate the work that is present in the Git repository of the student or group.
- Double-check that the Git repository belongs to the student or group. Ensure that the project is the expected one and also verify that "git clone" is used in an empty directory.
- Check carefully that no malicious aliases were used to fool you and make you evaluate something that is not the content of the official repository.
- To avoid any surprises, and if applicable, review together the scripts used to facilitate grading (such as testing or automation scripts).
- As an evaluator, if you have not completed the assignment you are going to grade, you must read the entire subject before starting the defense.
- Use the flags available on this scale to signal an empty repository, a non-functioning program, a norm error, cheating, etc. In these cases, the evaluation process ends and the final grade is 0, or -42 in case of cheating. However, except for cheating, students are strongly encouraged to discuss the work that was turned in together, in order to identify any mistakes that shouldn't be repeated in the future.

Preliminaries

If cheating is suspected, the evaluation stops immediately. Use the "Cheat" flag on the scale. Please and wisely, use this button with caution.

Simple preliminaries

- The defense can only occur if the student being evaluated is present. This way everybody is exchanging ideas and sharing knowledge with each other.
- Nothing submitted (or wrong file or directory) means 0, and the evaluation process ends.
- In order to grade your peer, you have to clone their Git repository on your machine.
- Ensure that 10 files (1 per level) are present at the root of the repository. Ensure that they are

✓ Yes

✗ No

README check

- Ensure that a README.md file is present at the root of the repository.
 - The very first line must follow the required format (italicized): "This project has been created by the 42 curriculum by <login...>"
 - Check that the README contains at least the following sections:
 - Description — brief overview of the project and goals.
 - Instructions — how to run the training interface (e.g., open index.html), how to evaluate and what to submit.
 - Resources — explicit list of resources used to complete the project (training interface files, documentation/references).
 - AI Usage — clear explanation of whether and how AI was used during the project.
 - Verify that the Resources section explicitly mentions networking concepts studied, such as:
 - TCP/IP addressing
 - subnet mask
 - default gateway
 - routers and switches
 - OSI layers
 - Verify that the Submission details are stated (10 exported configuration files, one per level, at the repository root).
 - If any of these elements are missing, the evaluation ends now.

✓ Yes

✗ No

Mandatory part

Mandatory Part

- This project is about configuring small-scale networks to make them function properly. You have to download the file attached to the project's page (the evaluated learner can show you where it is). Then, open the index.html file.
- A page will open in your web browser. Leave the login field empty to start the 'review' mode.
- In review mode, 3 random levels (from levels 6 to 10) will be automatically presented. The evaluated learner must correctly solve all 3 levels in a maximum of 15 minutes. Using the internet or any external resource to find answers is, of course, forbidden.

The use of a simple calculator such as "bc" is tolerated, but that will be the limit.

You can ask questions about the different levels to the reviewed learner.

✓ Yes

✗ No

Level 1

If something does not work as expected or is not clearly explained, the evaluation process ends now.

✓ Yes

✗ No

Level 2

If something does not work as expected or is not clearly explained, the evaluation process ends now.

 Yes

 No

Level 3

If something does not work as expected or is not clearly explained, the evaluation process ends now.

 Yes

 No

Ratings

Don't forget to check the flag corresponding to the defense

 Ok

 Outstanding project

 Empty work

 Incomplete work

 Cheat

 Crash

 Concern

 Can't support / explain code

Conclusion

Leave a comment on this evaluation (2048 chars max)

Finish evaluation
